The sign "<....(LOD)" or n.d. in column result means, the substance concerned cannot be detected within the limit of detection.

The sign "<....(+)" in column result means, the substance concerned has been qualitatively detected between limit of detection and limit of determination.

Parameter-specific analytical measurement uncertainties and information regarding the method of calculation will be provided upon request if the reported results are above the parameter-specific limit of quantification.

**According to the extent of the analysis the sample complies with the requirements of Warning values of the DGHM (Deutschen Gesellschaft für Hygiene und Mikrobiologie) " Published microbiological guideline and warning values for the evaluation of food" in the currently valid version.**

**Remark to Escherichia coli:**

According to the National Footnote, these are presumptively determined β-glucuronidase-positive Escherichia coli.

**Remark to Staphylococcus, coagulase-positive:**

Results below 150 cfu/g are considered as estimates.

**Remark to Salmonella spp.:**

In the testing of Salmonella spp. according to ISO 6579-1 Salmonella Typhi and Salmonella Paratyphi are not included. These bacteria/germs are hardly found in food. If on the side of the customer there is a justified case of suspicion these two subspecies can be analysed by a PCR test, which needs to be ordered separately by the customer. In case of positive Salmonella results a confirmation of Salmonella spp. was conducted by MALDI-TOF (database BDAL/7311 MSPS).

Start of testing: 08.03.2022

End of testing: 14.03.2022

*The results are related only to the samples tested. In cases where the laboratory has not been responsible for sampling, the reported results apply to the samples as received.
